

# HOW MANY HORSES

How many horses can you find in this classic piece of art? I'm not sure what's the name of this artist, but the image is great! Much fun.

There are four full sized horses, and 1 colt. Some say there is a partial rump and a partial face as well, totaling 7.

How many horses can you count in this image below? It's obvious there is one in the middle, but if you observe and pay attention you will find a few more!

1. One's reared up in the clouds to the far left.
2. One shows a face in the clouds utilizing the bird as an eye.
3. There is a purple one that's upside down on the right of the picture.
4. There's a white horse splashing through the waves running towards us just left of the purple horse.
5. The obvious one standing on the beach.
6. One is very large in the bushes to the left.

Some say the dark figure in the water is a horse as well, totalling 7.
